

QUANTUM INVENTIONS

---mobility intelligence---

QI provides mobility intelligence to consumers, automotive corporations, enterprise & government customers, leveraging on its integrated suite of connected navigation and enterprise logistics applications, with real-time intelligence provided through information and analytics platforms.

- In the Consumer and Automotive domain, QI provides leading edge connected navigation applications which fuse real-time information related to roadway conditions for convenience and safety through a rich user interface to provide a seamless user experience.
- QI has its own traffic and telematics services platform, mapSYNQ which provides the ability to collect, aggregate, process, fuse and disseminate navigation and automotive related information and communication services in a standards compliant fashion to end client applications and enterprise, or government applications.
- In the Enterprise logistics domain, QI provides track & trace products integrated with navigation, dispatch and optimization.
- QI has platform technologies covering Geographical Information Services (GIS) and Intelligent Transport Systems (ITS) needs in processing, planning, management, and analytics of related information towards providing operational decision support systems or intelligence towards management needs.

QI's SMART CITY PLATFORM DELIVERS SERVICES AND APPLICATIONS FOR CONSUMERS, ENTERPRISES AND GOVERNMENT
